I suoi interessi riguardano l'ottimizzazione dei parametri di processo delle tecniche di ingegneria delle superfici e la caratterizzazione microstrutturale, meccanica, tribologica e la valutazione della resistenza alla corrosione di rivestimenti spessi, sottili e di superfici modificate. Negli ultimi anni, ha portato avanti studi incentrati su: rivestimenti resistenti all'usura e/o alla corrosione per la protezione di componenti meccanici e la sostituzione del cromo duro (ossidi duri termospruzzati (allumina, cromia, allumina-titanio), cermets con leganti tradizionali e a base ferro e leghe metalliche (nickel, cobalto e recentemente ferro) depositate HVOF e HVOF, rivestimenti sottili a base carbonio (DLC) via

sistemi ibridi PECVD/PVD e coating spessi ottenuti tramite cold spraying); caratterizzazione di film sottili e spessi, con anche uso del Focused Ion Beam per analizzare rivestimenti ibridi multistrato; rivestimenti termospruzzati di ferriti come assorbitori di radiazione elettromagnetica nell'intervallo delle microonde; deposizione e caratterizzazione di rivestimenti ceramici e bioattivi (idrossiapatite, biovetri) di diverse composizioni tramite termospruzzatura da sospensione/soluzione al plasma (SPS/SPPS) e HVOF da sospensione (HVSFS); processi di diffusione per la protezione di superleghe di nichel dall'ossidazione e dalla corrosione ad alta temperatura. In particolare, negli ultimi anni ha affrontato: la tematica della sostituzione di Co e W (includere dalla Commissione Europea nella lista della Critical Raw Materials a partire dal 2011) in rivestimenti per la protezione di componenti meccanici; la simulazione FEM di impatti (termospruzzatura) e delle proprietà termomeccaniche e tribologiche di film e coatings.
