01/11/2018 – 31/10/2022

**PH.D. STUDENT IN "INDUSTRIAL INNOVATION ENGINEERING** DEPARTMENT OF SCIENCE AND METHODS FOR ENGINEERING – DISMI – UNIVERSITY OF MODENA AND REGGIO EMILIA

Research in the sector of systems for the energy conversion and recovery, environment, and sustainability. Involvement in the European Projects: ETEKINA and iWAYS. The overall objectives of the projects are the improvements of the energy efficiency of industrial processes by means of the valorisation of waste heat. The heat recovery solutions are demonstrated in three different industrial sectors.

I have worked on the following: supporting the coordination activities of the iWAYS project and leading commissioning of the heat recovery systems in ETEKINA project.

Development of numerical approaches (both lumped and distributed parameter and full CFD) that can simulate the performance of industrial processes in terms of energy consumption, environmental impact, and product quality.
